ACKNOWLEDGEMENTS

For completing this internship work, I have received the support and the guidance from many people whom I would like to mention with deep sense of gratitude and indebtedness. We extend our gratitude to our beloved **Chancellor, Vice Chancellor, Pro-Vice Chancellor, and Registrar** for their support and encouragement in completion of the project.

I would like to sincerely thank my internal guide **Mr. H Senthil Kumar**, Assisstant Professor, Presidency School of Computer Science and Engineering, Presidency University, for his moral support, motivation, timely guidance and encouragement provided to us during the period of our project work.

I am also thankful to **Dr. Asif Mohamed H B,** Head of the Department, Presidency School of Computer Science and Engineering Presidency University, for his mentorship and encouragement.

We express our cordial thanks to **Dr. Duraipandian N**, Dean PSCS & PSIS, and the Management of Presidency University for providing the required facilities and intellectually stimulating environment that aided in the completion of my project work.

We are grateful to **Dr. Md Ziaur Rahman,** Internship Coordinator and **Dr.Balakrishnan,** Program Internship Coordinator, Presidency School of Computer Science and Engineering, or facilitating problem statements, coordinating reviews, monitoring progress, and providing their valuable support and guidance.

We are also grateful to Teaching and Non-Teaching staff of Presidency School of Computer Science and Engineering and also staff from other departments who have extended their valuable help and cooperation.

SWARNADEEP DUTTA

ABSTRACT

The preservation of animals and the education of the society about the richness of nature are two important issues that humanity faces today. As educational and recreational centers, traditional zoos have been around for a long time; nevertheless, they have problems such as the welfare of animals, access to the people living far away, and the safety of visitors physically. Moreover, the cost and effort of running real zoological parks are tremendous. This initiative offers "BioRealm," a deeply immersive virtual wildlife platform, as a digital answer to these problems.

BioRealm is an online service that aims at the recreation of a wildlife sanctuary spread worldwide. The model merges the sound and video libraries of ultra-resolution along with a 360-degree virtual safari element so that the users can visit the earth's different ecosystems without any restriction in the real world. In contrast to traditional learning methods, BioRealm takes an engaging method that is a quiz component with gamified features used for interaction and thus the learning gets reinforced which was based on animal behaviors, scientific classifications, and habitat conservation. This work made use of present-day internet technologies such as HTML, CSS, and JavaScript for the user interface and immersive media integration for virtual experience.

The creation of BioRealm is a testament to the idea that online zoos might be the right, easily expandable, and feasible alternatives to large scale physical captivity. To attract the users, as one of the main features, BioRealm presents a safe, easy, accessible and "Edutainment" style platform thus it can be considered as a practical solution to the issues stated by the United Nations Sustainable Development Goals (SDGs) in terms of quality education and life on land. U.N. SDGs propound quality education and life on land as two major issues which this digital platform named BioRealm takes a sizable leap in solving these problems providing an interesting platform of 'edutainment' in a safe, accessible, and engaging nature. This document comprehensively explains the research approach, the design, the execution, and the appraisal of the BioRealm team to the next generation of wildlife education.
